PROFESSIONAL SUMMARY

Lead Software Engineer with over 11 years of experience delivering scalable mobile applications and AI integrations across diverse industries including telecommunications, fintech, and automotive.

Skilled in Android and iOS development using Kotlin, Swift, Jetpack Compose, SwiftUI, and React Native, with expertise in modular and clean architecture.

Proven ability to integrate advanced AI technologies such as Large Language Models, AI Agents, and speech interfaces to enhance user experiences.

Strong background in backend API integration, real-time systems, mobile security, and CI/CD pipelines, driving high-quality software delivery and innovation.

TECHNICAL SKILLS

Languages: C#, Java, Kotlin, Swift, Python, TypeScript

Mobile: Android SDK, Jetpack Compose, AndroidX, SwiftUI, React Native, Kotlin Multiplatform (KMP)

AI: Large Language Models, LLM APIs, AI Agents, Retrieval-Augmented Generation (RAG), AI Knowledge Search, Embeddings, OpenCV, Speech-to-Text, Text-to-Speech

Architecture: Clean Architecture, MVVM, MVVM-C, MVI, UDF, Modular Architecture, Multi-Module Development, System Design

Backend/API: REST APIs, GraphQL, Apollo GraphQL, WebSockets, MQTT, OAuth 2.0, JWT

Cloud/DevOps: AWS, Firebase, Google Cloud, CI/CD, Jenkins, GitHub Actions, Fastlane, CircleCI

Data: PostgreSQL, SQLite, Room, SQLCipher, Offline-First Architecture, Caching

Connectivity: BLE, IoT, Fused Location Provider, Google Maps, Real-Time Systems

Security: Biometric Authentication, Face ID, Touch ID, Secure Enclave, Device Attestation, Certificate Pinning, TLS

PROFESSIONAL EXPERIENCE

Lead Android Developer

T-Mobile | Remote | 01/2024 – Present

- Led modernization of T-Life, a high-scale platform with **100M+ installs and 24M+ monthly active users**, improving scalability, reliability, and delivery across core customer experiences.
- Migrated **80%+ of Android UI from XML to Jetpack Compose**, establishing reusable components and Material 3 patterns that reduce new UI effort by 30% across 25+ feature screens.
- Architected a feature-based multi-module Android platform spanning **20+ feature modules** and supporting 6+ engineering teams, enabling independent releases and cutting Gradle build times by 35%.
- Established Clean Architecture and MVVM across **20+ modules**, reducing cross-feature dependencies by approximately 30% and improving maintainability of the production codebase.

- Integrate LLM APIs and AI Agents into mobile features to support intelligent workflows and personalized experiences.
- Implement conversational experiences using Speech-to-Text and Text-to-Speech, blending voice interactions with AI-driven mobile flows.
- Integrate Apollo GraphQL for personalized offers and real-time data retrieval, while strengthening mobile security through OAuth 2.0, JWT, biometric authentication, device attestation, and Scam Shield capabilities.

Senior iOS / Cross-Platform Mobile Developer

Goldman Sachs | New York, NY | 11/2021 – Present

- Architect **high-frequency trading and wealth-management mobile experiences** using React Native, TypeScript, Swift, and SwiftUI.
- Design modular MVVM-C architecture with Combine and Unidirectional Data Flow for real-time market data, transactions, and AI workflows.
- Lead migration of **70%+ of the iOS presentation layer** from UIKit to SwiftUI, reducing UI development effort by approximately 30%.
- Develop custom Swift native modules for React Native to speed high-performance processing and bridge cross-platform and iOS functionality.
- Integrate **low-latency WebSocket market-data feeds** to support responsive trading experiences and real-time financial information.
- Integrate LLM APIs and Python-based AI services into mobile workflows to support AI-driven analysis and intelligent user experiences.
- Implement secure financial-data workflows and automated testing and CI/CD pipelines with XCTest, Jest, Detox, Jenkins, GitHub Actions, and Fastlane, supporting Marcus by Goldman Sachs, a digital banking platform serving **3M+ customers globally** and managing **\$100B+ in consumer deposits**.

Senior Android Developer

Spirit Airlines | Seattle, WA | 09/2019 – 10/2021

- Led Android development for Spirit Airlines' travel app across booking, check-in, boarding, loyalty, and payment flows in Kotlin.
- Migrated **60%+ of legacy Java modules to Kotlin**, improving maintainability and reducing implementation complexity across the Android codebase.
- Designed offline-first mobile architecture with Room, Retrofit, OkHttp, and local caching to support unstable network conditions.
- Built reusable Android UI components with AndroidX, RecyclerView, ConstraintLayout, and Jetpack Compose to improve consistency and development efficiency.
- Established automated testing and CI/CD with Espresso, CircleCI, GitHub Actions, Firebase, and release smoke testing to improve deployment confidence and reliability.

Android Developer

Chevrolet | Detroit, MI | 12/2017 – 08/2019

- Developed connected-vehicle mobile experiences for **8+ vehicle models**, integrating Android SDK, cloud, and in-vehicle systems for telemetry and vehicle location.
- Built remote vehicle control experiences across Android SDK and cloud systems for reliable in-app command execution.
- Engineered low-latency vehicle communication with REST APIs, GraphQL, and MQTT, adding offline command queuing and conflict resolution.
- Architected modular Android applications for multiple vehicle models and regional variants, improving reuse across product configurations.

- Implemented BLE connectivity for device discovery, proximity, pairing, and connected-vehicle experiences.
- Secured remote vehicle functionality through certificate-based device authentication and secure session management.
- Optimized background synchronization, network communication, caching, and UI performance to reduce CPU and battery consumption.

Android Developer

JCPenney | Plano, TX | 04/2016 – 11/2017

- Built secure Android checkout workflows with payment tokenization and reliable transaction handling in Kotlin and Android SDK.
- Optimized offline caching and image loading to reduce memory pressure and improve scrolling and startup performance.
- Improved app stability by fixing memory leaks, ANRs, rendering bottlenecks, and other customer-facing performance issues.
- Implemented automated testing and CI/CD with JUnit, Mockito, and Espresso to support multi-flavor and white-label releases.
- Developed scalable Android commerce features across product catalogs, search, cart, checkout, promotions, payments, and personalized recommendations, where app customers generated **3.5× more purchases** than non-app customers and made 3× as many store visits.
- Supported a broader mobile commerce experience by connecting core shopping flows into a cohesive, high-performing Android app.

Android Developer

Regeneron Pharmaceuticals | Tarrytown, NY | 01/2015 – 03/2016

- Improved **app uptime by 18%** through offline sync, background processing, and network retry logic.
- Resolved 30+ **mobile bugs per sprint** to keep Android field workflows stable and reliable.
- Developed secure Android applications for research and field operations, supporting enterprise data-collection workflows in Kotlin.
- Implemented offline-first synchronization with SQLite, background processing, and retry strategies for unreliable network conditions.
- Built encrypted storage, role-based access control, and HIPAA-aware logging to protect sensitive application data.
- Integrated REST APIs with Retrofit and OkHttp, and added resilient error handling for field data submissions.

EDUCATION

Bachelor of Computer Science in Software Development | Old Dominion University
| Norfolk, VA | 2019 – 2021
